Steps:

- Ensure your mobile/laptop is connected to the same Wi-Fi network
- Open a browser and enter:

 http://smartcam.local

Login

- Enter the created password
- Access the configuration interface

7. System Testing Procedure

To test the device:

1. Power ON the system
2. Wait until it connects to Wi-Fi
3. Move in front of the PIR sensor
4. Check for:
    1. Motion detection
    2. Image capture
    3. Telegram alert

7. Expected Output

When motion is detected, the user will receive:

- Device ID
- Location details
- Date
- Time
- Captured image

9. Important Notes

- Ensure PIR sensor and camera are aligned in the same direction
- Use a stable 5V power supply
- Avoid placing the sensor near heat or moving objects
- Ensure internet connection is active for Telegram alerts

10. Network Note

- The address smartcam.local works only when:
    - Device and user are connected to the same Wi-Fi network

11. Conclusion

This guide helps users to easily configure, access, and test the SmartCam device. Proper setup ensures reliable performance and accurate motion detection.
